

Type Effects

Stroke Effect

1. Type a word and make two copies, pasting-to-back twice to create a stack of three.
2. Select center word and give it a White Stroke of 3 pts.
3. Select the rearmost word and give it a colored stroke of 6 pts.
4. This creates a nice effect without choking the font, doing justice to the typeface!
5. Type edits must be made before this effect is applied!
